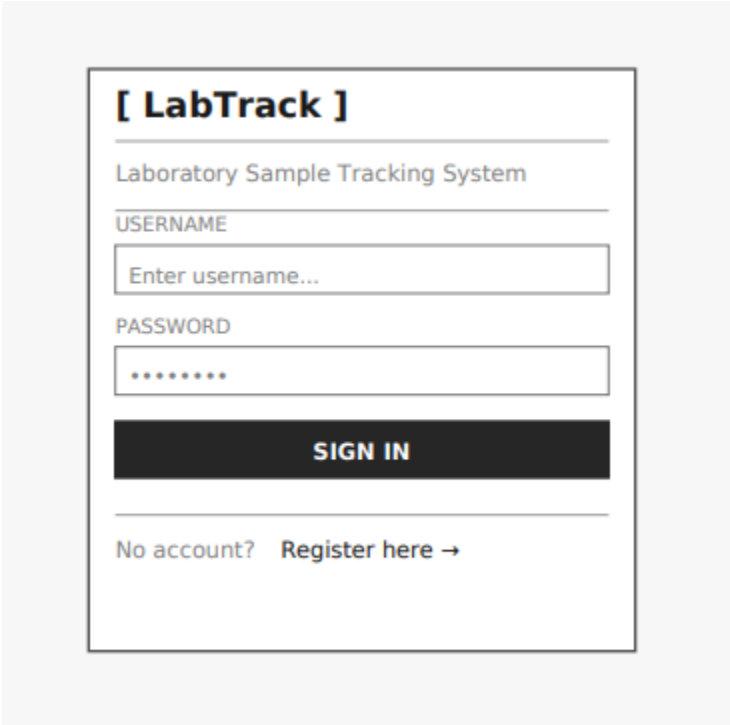
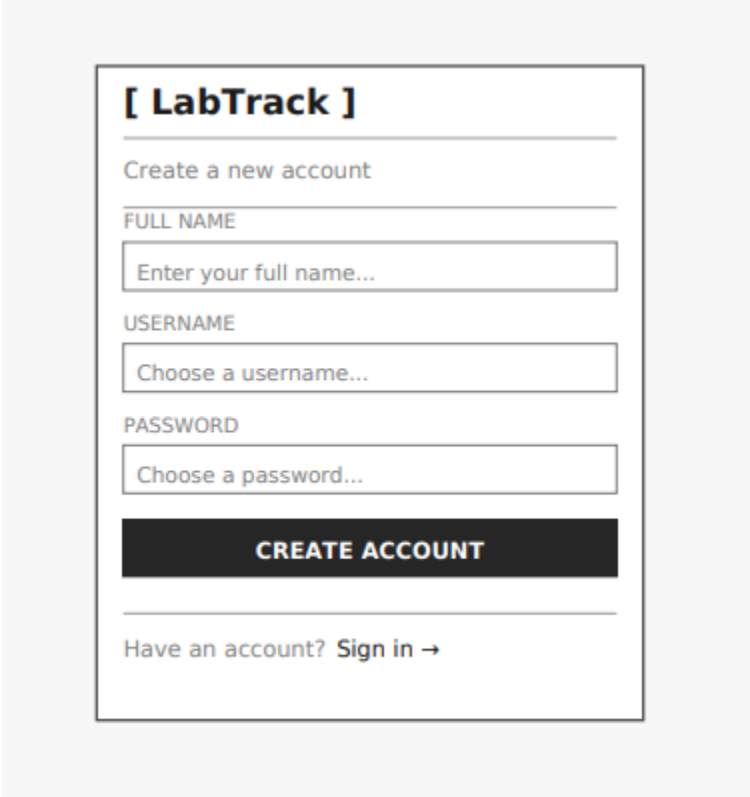
1. Login Page /login



Annotations:

1. All fields required. Wrong credentials show inline error, page stays.
2. Sign In posts to /login. On success → redirected to Dashboard.
3. 'Register here' navigates to Register page.

2. Register Page /register

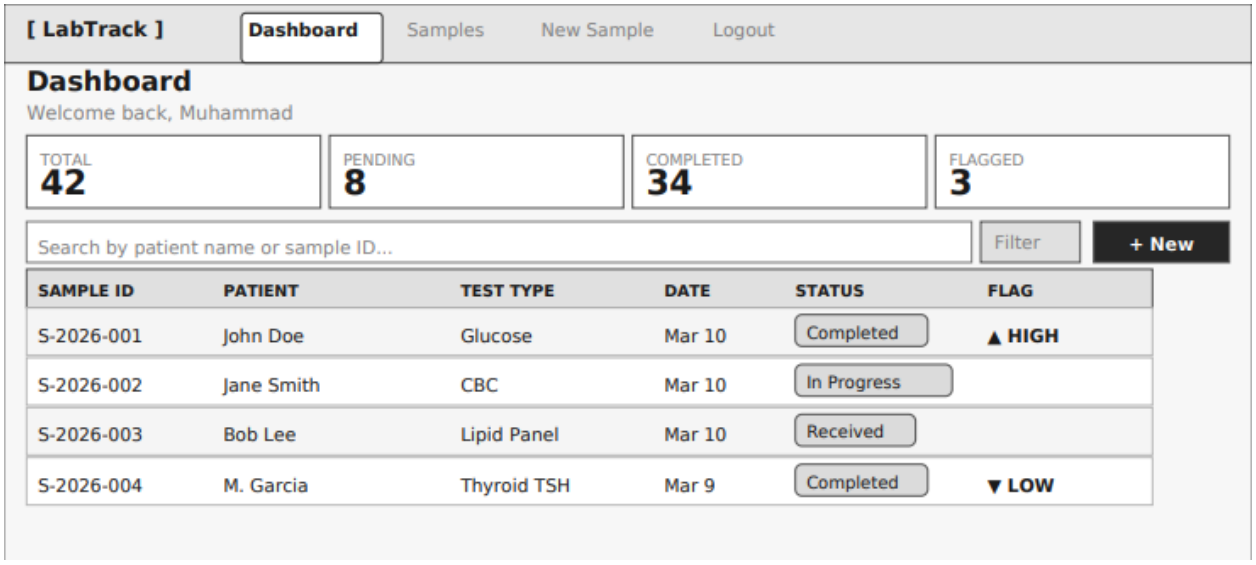


Annotations:

1. All three fields required. Duplicate username shows inline error.
2. On success → account created, redirected to Login with confirmation.
3. 'Sign in' navigates back to Login page.

3. Dashboard Page /dashboard

Status: No filter applied - all sample shown

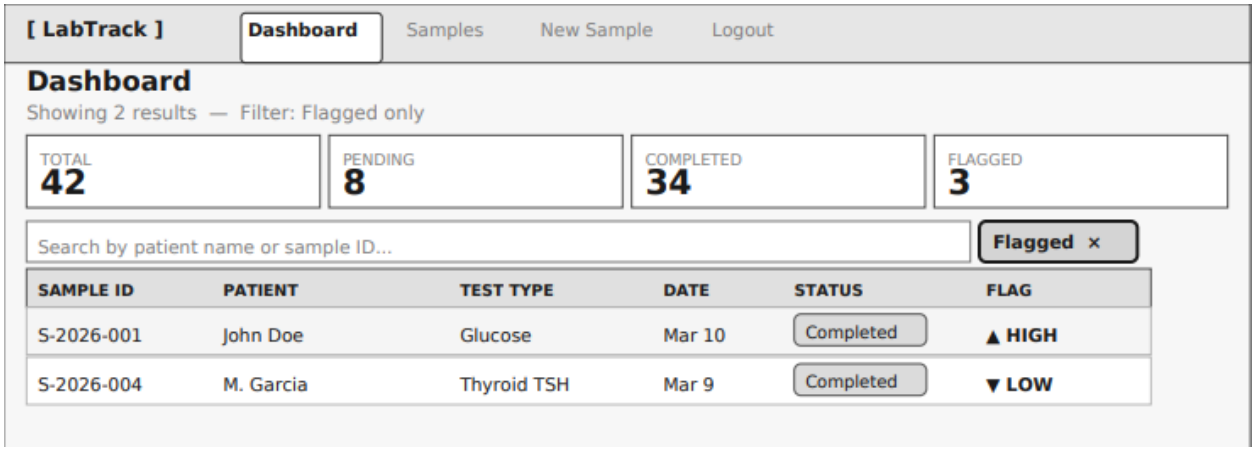


Annotations:

1. No filter applied - all samples shown, newest first.
2. HIGH / LOW flags auto assigned by service layer, not entered manually.
3. Clicking any row opens that sample's detail page.
4. '+ New' button navigates to New Sample form.

4. Dashboard Page /dashboard-flagged

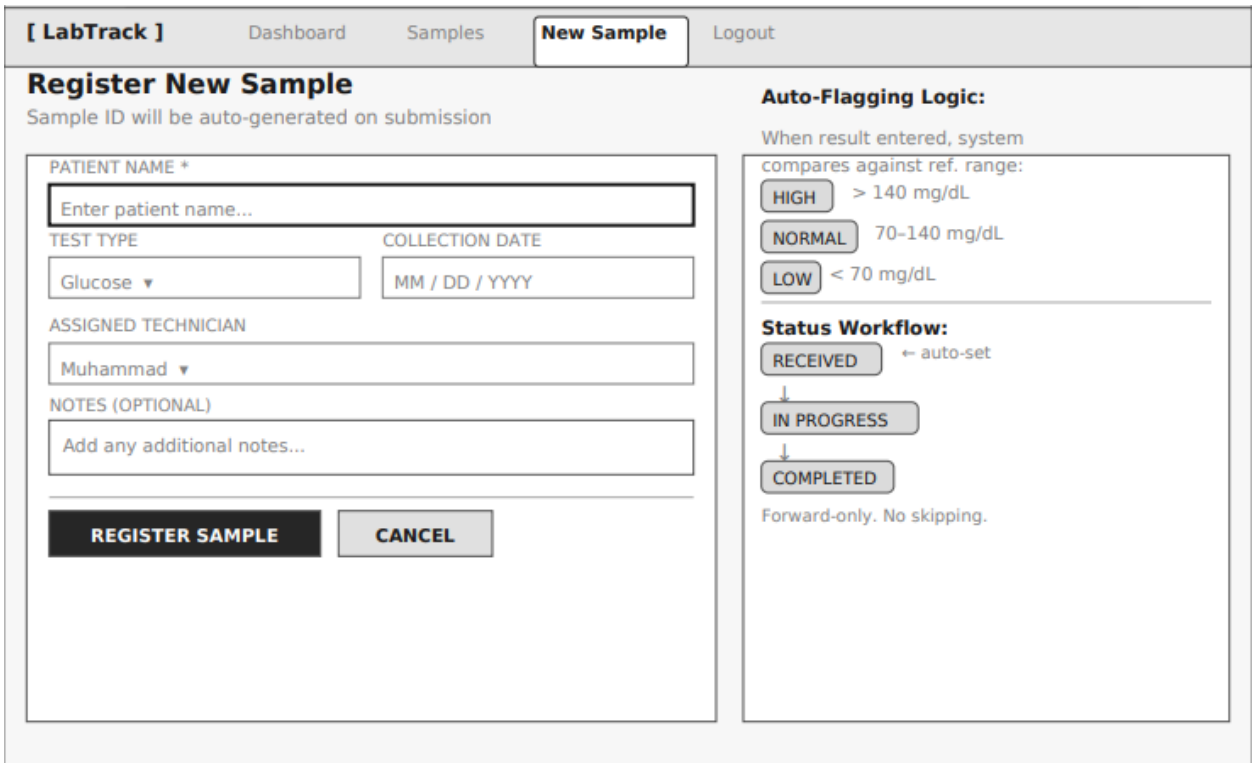
Status: Flagged’ filter applied - all sample shown



Annotations:

1. Active filter shown as dark pill with × to clear it.
2. Only samples with HIGH or LOW flag appear in the table.

5. New Sample Registration Page /newsample

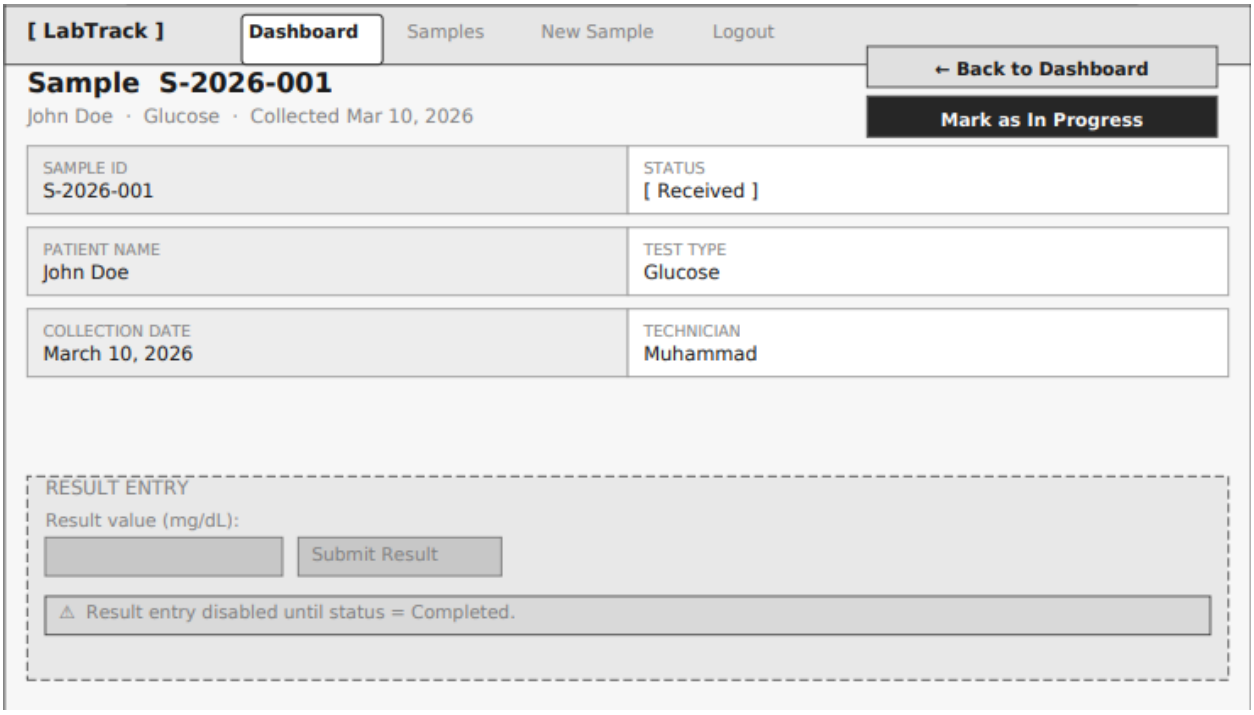


Annotations:

1. Patient Name is required and auto-focused on page load (thick border).
2. Test Type dropdown populated from the database TestType table.
3. Register Sample → creates record with status RECEIVED.
4. Side panel is informational only - shows rules for the selected test type

6. Sample Detail Page /sampledetail

Status = Received – No result entered yet

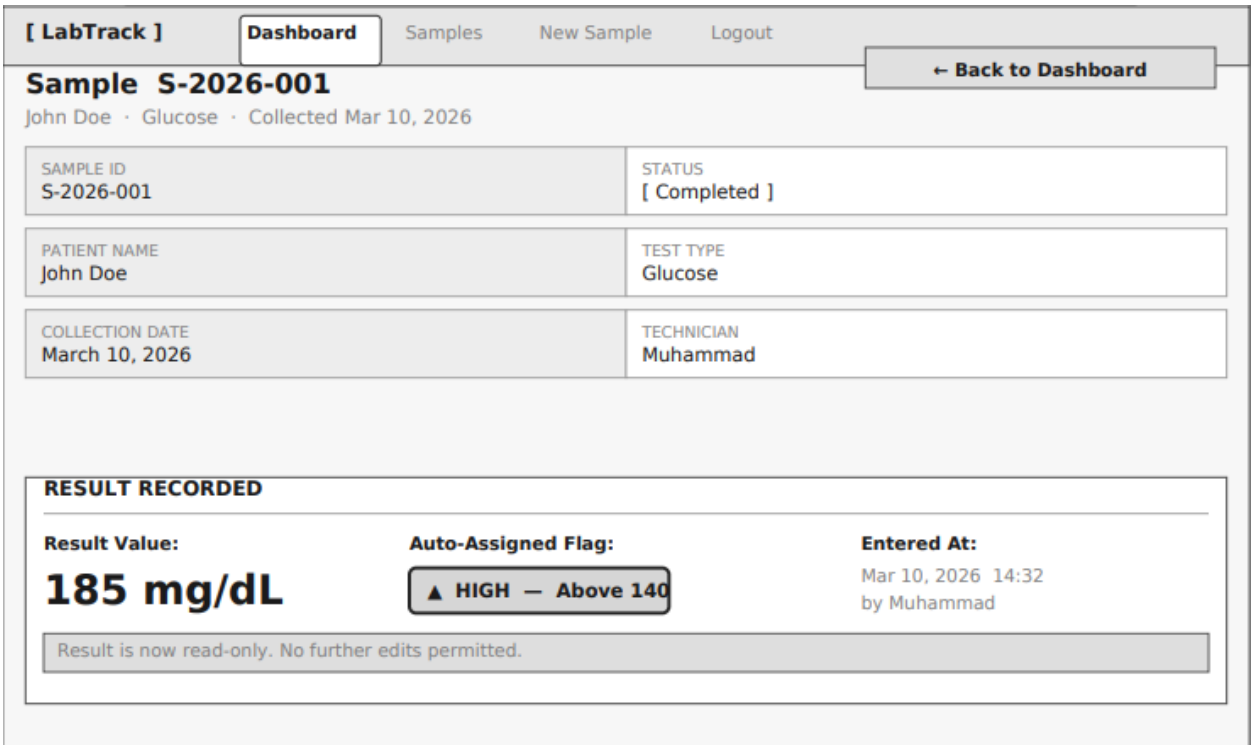


Annotations:

1. 'Mark as In Progress' advances the status. Page reloads with updated state.
2. Result entry area is grayed out and disabled at this stage.
3. Warning note explains why - enforces the workflow rule visually.

7. Sample Detail Page /sampledetail-completed

Status = Completed – result entered , flag auto-assigned



Annotations:

1. 185 > 140 (ref. max) → service layer auto-assigns HIGH. No manual tagging.
2. Flag stored in Result entity and shown in Dashboard table.
3. Status advance buttons removed - Completed is the final state.
